

## Number Plate Maths Ideas

- Add the numbers on the number plate—find the biggest total
- Find the difference between the biggest number you can make using all of the digits and the smallest
- Pick two number plates and use the digits to make as many different numbers as you can—put them in ascending or descending order
- If A = 1 B = 2 Z = 26 etc and numbers are their value which number plate is worth the most—can you find a number plate that equals exactly 100 or a multiple of 10 etc

## Memory and Concentration Game Ideas **Don't FORGET!**

- Clapping patterns—repeat back
- I went to the shops and I bought... (start alphabetically)
- Pairs—using playing cards or any cards that can be matched—you could make your own with number facts or times tables to work on!!
- The tray game
- Simon says... quick thinking
- Treasure cups—arrange some cups upside down and hide objects under each one (buttons, coins, rubbers, chocolates!!) Take it in turns to uncover a cup if the amount and type of treasure match you get to keep them in your pile. You could change it to find number bonds to 10 for younger children
- The coin game—have a pile of coins, a piece of card and a stop watch. Create a sequence using some coins e.g. three 2ps and two 50ps. Let them look for a set time then cover it over. The child then has to recreate the pattern. They can try and beat their times, add more coins, use a wider range of coins etc
