

Maths is Everywhere!

This challenge is for the whole school.

Nearly all maths involves numbers. Without numbers the world would be a very different place. For this challenge you need to be number detective. You need to find numbers in as many different places as possible and if you can, (or with help from someone at home!) you need to tell me what job the numbers do. I have put a couple of examples in the table below. Feel free to create your own table if you find too many numbers!

Place where you saw the numbers	Job of the numbers
Clock	Help us tell the time
Bar codes	Identifying the product being paid for
Telephone	Typing in phone numbers

CHALLENGE: Can you find numbers in any places that nobody else thinks of?

Return your entry to Mrs Stroud
by Monday 1st February
